

St Mary's, Scone, is located towards the southern side of the town diagonally opposite the historic St Mary's church. The school's site is a long thin formation with good street frontage with several excellent areas for siting a new hall with good school and community access.

The main school buildings currently are located at then northern end of the site with a wing of demountable buildings along the Waverley Street frontage. A former convent building is situated approximately two thirds along the Waverley Street frontage with another relatively level open space beyond.

Locating the new hall at the southern edge of the main playground space north of the former convent forms a new quadrangle space. The new hall will open to the north onto the open space via a glazed operable wall. Separate public access is available from Waverley Street and overflow parking south of the former convent is retained in this master plan.

The hall is a simple rectangular space with a raking ceiling to allow high level natural south lighting and a large cantilevered verandah along the northern elevation protecting the large operable glazed wall opening on to the playground. The roof form returns down the rear elevation.

A canteen and toilets block will form a masonry wall to the western street frontage with dual purpose 'stage'/teaching space forming a balancing block to eastern elevation.
